7th International Symposium

on Physical Protection and Decontamination

18-20 May, 2016; Munster/Germany

As recent events have shown, Toxic Industrial Materials in addition to the classic NBC-threat present a clear and present danger, both to the warfighter and the 1st Responder.

To manage this threat, the warfighter must be enabled to continue his mission and the population to return to normal living conditions – efforts, which cannot be successful without new, innovative concepts and technologies for physical Protection and decontamination procedures. Hence, Civil-Military Co-Operation gains an ever increasing importance in today's strategic CBRN theatre.

We invite you to take advantage of the unique opportunity this prestigious conference is offering to academia, industry and the user.

- Gather information on available and emerging technologies;
- Present your research results, your technical solutions to the community;
- Get first hand knowledge of the capabilities needed by the user community;
- Demonstrate your systems to the user;
- Keep up with conceptual developments on the user side;
- Enhance your business opportunities by extending your network.
- Have a look at the interface between the military and the first responder;
